

Lista de Exercícios 2 – Kauan Henrique Werlich

1. a)

b)

c)

2. Máquina de Turing **Determinista** de uma Fita:

Máquina de Turing Determinista de duas Fitas (EXTRA):

Máquina de Turing **não determinista** com duas Fitas:

3. Para a máquina determinista de uma só fita: (coloquei os nomes dos estados q_0, q_1, \dots, q_9 nas configurações só com números para deixar mais limpo)

0abab \vdash x1bab \vdash xb1ab \vdash xba1b \vdash xbab1 \vdash xba2b \vdash xb3ay \vdash x3bay \vdash 3xbay \vdash x0bay \vdash xy1ay \vdash xya1y \vdash xy2ay \vdash x3yxy \vdash xy0xy \vdash x4yxy \vdash 4xbxy \vdash 4_abxy \vdash 5abxy \vdash x6bxy \vdash xb6xy \vdash x8bwy \vdash 8xvwy \vdash x5bwy \vdash xy7wy \vdash xyw7y \vdash xy8ww \vdash x8yww \vdash xy5ww \vdash xyw9w \vdash chegou no q_9 então **aceita**

EXTRA: Agora para a máquina determinista de duas fitas:

(0abab, 0_) \vdash (a1bab, x1_) \vdash (ab0ab, x0_) \vdash (aba1b, xx1_) \vdash (abab0_, xx0_) \vdash (aba2b, x2x) \vdash (ab2ab, 2xx) \vdash (a2bab, 2_xx) \vdash (2abab, 2_xx) \vdash (2_abab, 2_xx) \vdash (3abab, 3xx) \vdash (a3bab, a3x) \vdash (ab3ab, ab3_) \vdash (ab4ab, a4b) \vdash (ab4ab, 4ab) \vdash (ab4ab, 4_ab) \vdash (ab5ab, 5ab) \vdash (aba5b, 5b) \vdash (abab5_, 5_) \vdash (abab6_, 6_) chegou no q_6 então **aceita**

4.

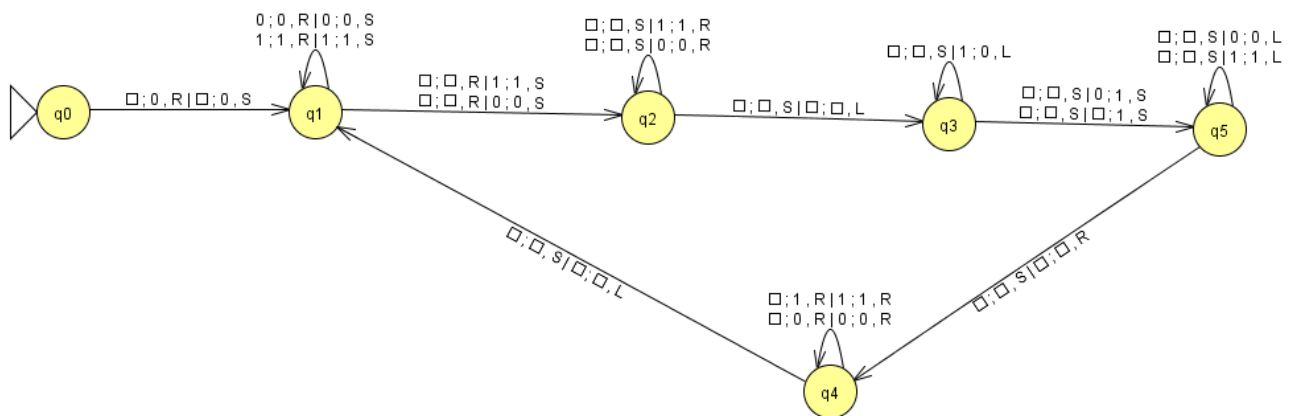

a)

b) (Complemento de a))

5.

6. Máquina de Turing Não Determinista de 2 fitas (reconhecadora, não decisora = entra em loop para algumas entradas que não são aceitas pela linguagem)
